

INTRODUCING NEW

# ROCK<sup>TM</sup> Cement

## All Ceramic Self-Adhesive Resin Cement for Ceramic, Zirconia, Lithium Disilicate and Metal.

New **ROCK Cement** is a dual-cure, self-adhesive resin cement used for the permanent cementation of ceramics, zirconia, lithium disilicate and metal. With its proprietary setting technology, **ROCK** sets faster and more completely than other self-adhesive cements. Its thin film thickness makes it easier for you to seat your restorations without the hassle of occlusal adjustments. **ROCK Cement** is easy to use, fast to clean-up, has superior marginal adhesion, virtually no post-op sensitivity, and is a real time-saver for you and your patients.

**Cosmedent's ROCK Cement** can be used with all types of bonding agents if extra adhesion is desired, but no primers or bonding agents are required.

## INTRODUCING NEW **ROCK Cement** 7g AutoMix Syringe

- Self-adhesive — a real time-saver
- Easy-to-Use
